

GB1510-SFP-LC/SC.S80

GB1570-SFP-LC/SC.S80

**Single-Mode 100Mbps to 1.25Gbps FE/GBE /FC
SC/LC Single-Fiber SFP Transceiver
RoHS Compliant**

Features

- ◆ Up to 1.25Gbps Data Links
- ◆ 24/32/34dB power budget optional
- ◆ Tx/Rx Wavelength are compliant with ITU-T G.694.2, with wavelength spacing more than 60nm
- ◆ Single 3.3V Power supply and TTL Logic Interface
- ◆ Hot-Pluggable SFP Footprint Simplex LC Connector Interface
- ◆ Class 1 FDA and IEC60825-1 laser safety compliant
- ◆ Operating Case Temperature Standard: 0°C~+70°C
- ◆ Extended: -20°C~+85°C
- ◆ Compliant with SFP MSA
- ◆ Compliant with SFF-8472
- ◆ Safety Certification: TUV/UL/FDA^{*Note1}
- ◆ RoHS Compliant

Applications

- ◆ Fiber Channel Links
- ◆ Gigabit Ethernet
- ◆ Fast Ethernet
- ◆ WDM Gigabit Ethernet Links
- ◆ Other Optical Links

Ordering information

Part No.	Data Rate	Power budget	Interface	Temp.	DDMI
GB1XX0-SFP-SC.S80*(Note2)	125~1250Mbps	≥24dB	SC	Standard	YES
GB1XX0-SFP-SC.S80(WT)	125~1250Mbps	≥24dB	SC	Extended	YES
GB1XX0-SFP-LC.S80	125~1250Mbps	≥24dB	LC	Standard	YES
GB1XX0-SFP-LC.S80(WT)	125~1250Mbps	≥24dB	LC	Extended	YES

Note1: For the latest certification information, please check with Data Controls Inc.

Note2: Standard version, X refer to CWDM Wavelength range 1270nm to 1610nm, A=1270, B=1290...Q=1590, R=1610. TX and RX wavelength spacing must $\geq 60\text{nm}$. Typical transmitter and receiver wavelength combinations of 19dB power budget list in the following table. For the relation between transmission distance and power budget, it is related to the power penalty, the value is about 0.40~0.45dB/km under 1270~1450nm and 0.30~0.35dB/km under 1470~1610nm.

*The product image only for reference purpose.

CWDM* Wavelength

Band	Nomenclature	Wavelength(nm)		
		Min.	Typ.	Max.
O-band Original	A	1264	1270	1277.5
	B	1294	1290	1297.5
	C	1304	1310	1317.5
	D	1324	1330	1337.5
	E	1344	1350	1357.5
E-band Extended	F	1364	1370	1377.5
	G	1384	1390	1397.5
	H	1404	1410	1417.5
	I	1424	1430	1437.5
	J	1444	1450	1457.5
S-band Short Wavelength	K	1464	1470	1477.5
	L	1484	1490	1497.5
	M	1504	1510	1517.5
	N	1524	1530	1537.5
C-band Conventional	O	1544	1550	1557.5
L-band Long Wavelength	P	1564	1570	1577.5
	Q	1584	1590	1597.5
	R	1604	1610	1617.5

CWDM*: 18 Wavelengths from 1270nm to 1610nm, each step 20nm. Please contact Data Controls Inc. to confirm the wavelength availability.

Product Description

GB1XX0-SFP-LC/SC.S80 is small form factor pluggable module for GBE/FC single fiber communications. It is with the SFP 20-pin connector to allow hot plug capability.

Absolute Maximum Ratings

Parameter	Symbol	Min.	Max.	Unit
Storage Temperature	T _s	-40	+85	°C
Supply Voltage	V _{cc}	-0.5	3.6	V
Operating Relative Humidity		-	95	%

*Exceeding any one of these values may destroy the device immediately.

Recommended Operating Conditions

Parameter	Symbol	Min.	Typical	Max.	Unit
Operating Case Temperature	T _c	GB1XX0-SFP-LC/SC.S80	0	+70	°C
		GB1XX0-SFP-LC/SC.S80 (WT)	-20	+85	
Power Supply Voltage	V _{cc}	3.15	3.3	3.45	V
Power Supply Current	I _{cc}			300	mA
Date Rate	FE		100		Mbps
	FC		1.063		Gbps
	GBE		1.25		Gbps

Performance Specifications – Electrical

Parameter	Symbol	Min.	Typ.	Max	Unit	Notes
Transmitter						
LVPECL Inputs(Differential)	V _{in}	400		2000	mVpp	AC coupled inputs*(note5)

(CWDM DFB and PIN-TIA with 24dB Power Budget)

Parameter	Symbol	Min.	Typical	Max.	Unit
Power budget		24			dB
Data Rate		100		1250	Mbps
Transmitter					
Channel Centre Wavelength*(note9)		λ_c -6	λ_c	λ_c +7.5	nm
Spectral Width (-20dB)	$\Delta\lambda$			1	nm
Side Mode Suppression Ratio	SMSR	30			dB
Average Output Power*(note3)	Pout	0		+5	dBm
Extinction Ratio*(note4)	ER	9			dB
Rise/Fall Time(20%~80%)	tr/tf			2	ns
Output Optical Eye*(note4)	Compliant with IEEE 802.3ah-2004*(note7)				
TX_Disable Assert Time	t_off			10	Us
Receiver					
Channel Centre Wavelength*(note9)		λ -20	λ	λ +20	nm
Receiver Sensitivity*(note6)	Pmin			-24	dBm
Receiver Overload	Pmax	-3			dBm
Return Loss		12			dB
Optical Path Penalty				1	dB
LOS De-Assert	LOSD			-25	dBm
LOS Assert	LOSA	-35			dBm
LOS Hysteresis*(note8)		0.5			dB

Note3: Output is coupled into a 9/125 μ m single-mode fiber.

Note4: Filtered, measured with a PRBS 2⁷-1 test pattern @1250Mbps.

Note5: LVPECL logic, internally AC coupled.

Note6: Measured at all data rates specified in Data Rate table with ER=9 dB, 2⁷-1 PRBS data pattern, BER <1E-12.

Note7: Eye pattern mask

Note8: LOS Hysteresis

Note9: The channel center wavelength of transmitter side is compliant with table <CWDM* Wavelength (0~70C)>, and the channel center wavelength of receiver side is the typical wavelength of CWDM channel $\pm 20\text{nm}$

Notes:

1) TX Fault is an open collector/drain output, which should be pulled up with a 4.7K – 10KΩ resistor on the host board. Pull up voltage between 2.0V and VccT, R+0.3V. When high, output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.

2) TX disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7 – 10 K Ω resistor. Its states are:

Low (0 – 0.8V): Transmitter on

(>0.8, < 2.0V): Undefined

High (2.0 – 3.465V): Transmitter Disabled

Open: Transmitter Disabled

3) Mod-Def 0,1,2. These are the module definition pins. They should be pulled up with a 4.7K – 10KΩresistor on the host board. The pull-up voltage shall be VccT or VccR. Mod-Def 0 is grounded by the module to indicate that the module is present Mod-Def 1 is the clock line of two wire serial interface for serial ID Mod-Def 2 is the data line of two wire serial interface for serial ID

4) LOS (Loss of Signal) is an open collector/drain output, which should be pulled up with a 4.7K – 10KΩ resistor. Pull up voltage between 2.0V and VccT, R+0.3V. When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.

5) VeeR and VeeT may be internally connected within the SFP module.

6) RD-/+: These are the differential receiver outputs. They are AC coupled 100Ω differential lines which should be terminated with 100Ω (differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 370 and 2000 mV differential (185 –1000 mV single ended) when properly terminated.

7) VccR and VccT are the receiver and transmitter power supplies. They are defined as 3.3V ±5% at the SFP connector pin. Maximum supply current is 300mA. Recommended host board power supply filtering is shown below. Inductors with DC resistance of less than 1 ohm should be used in order to maintain the required voltage at the SFP input pin with 3.3V supply voltage. When the recommended supply-filtering network is used, hot plugging of the SFP transceiver module will result in an inrush current of no more than 30mA greater than the steady state value. VccR and VccT may be internally connected within the SFP transceiver module.

8) TD-/+: These are the differential transmitter inputs. They are AC-coupled, differential lines with

100Ω differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board. The inputs will accept differential swings of 400 – 2000 Mv (250 – 1200Mv single-ended), though it is recommended that values between 500 and 1200 Mv differential (250 – 600Mv single-ended) be used for best EMI performance.

EEPROM

The serial interface uses the 2-wire serial CMOS EEPROM protocol defined for the ATMEL AT24C02/04 family of components. When the serial protocol is activated, the host generates the serial clock signal (SCL). The positive edge clocks data into those segments of the EEPROM that are not write protected within the SFP transceiver. The negative edge clocks data from the SFP transceiver. The serial data signal (SDA) is bi-directional for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The memories are organized as a series of 8-bit data words that can be addressed individually or sequentially.

The Module provides diagnostic information about the present operating conditions. The transceiver generates this diagnostic data by digitization of internal analog signals. Calibration and alarm/warning threshold data is written during device manufacture. Received power monitoring, transmitted power monitoring, bias current monitoring, supply voltage monitoring and temperature monitoring all are implemented. The diagnostic data are raw A/D values and must be converted to real world units using calibration constants stored in EEPROM locations 56 – 95 at wire serial bus address A2h. The digital diagnostic memory map specific data field define as following .For detail EEPROM information, please refer to the related document of SFF 8472 Rev 9.3.
